Chappell J, Manna KR, Noel JP, Starks CM; WPI; 2000-292839/25. P-PSDB; AAY90858. Novel terpene synthase enzymes, useful for producing terpene hydrocarbons, e.g. fragrances or antitumor agents, are derived from known enzymes by specific amino acid alterations.

The present invention describes an isolated terpene synthase (1) comprising a region with at least 20% identity to region 265-535 of a 548 Disclosure; Page 439-443; 450pp; English.

carbon atoms (alphac) that have interationic distances, between each other, within tabulated ranges, have a centre point (within a sphere of ardius 2:3 Angstrom) within tabulated ranges, and have an ordered arrangement of R groups (defining as side chains), excluding specific tabulated arrangements (tables given in the specification). (I), and collect enzymes, are used to produce a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances, flavours, pheromones, defensive agents, pigments, antitumour agents, components of signal transduction pathways, precursors of steroid chormones and bile acids, as photoreceptors and as co-factor side chains. Some synthases with little or no catalytic activity (and nucleic acids encoding them) are used as controls in the analysis of products formed by carymatic synthesis; as nutrient supplements; for affinity purification of isopremoids, or to develop immunological reagents or nucleic acids for monitoring expression of terpene synthases may produce novel terpene products. ApA38910 to AAA38938 and AAY90831 to AAY90859 represent invention AAY90831. (I) contains nine alpha given in sequence (Ia),

E-alpha-bisabolene synthase is a wound- inducible enzyme capable of generating multiple sesquiterpenes, especially E-alpha-bisabolene, from farnesyl diphosphate. The invention provides gymnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing praduction of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenolds, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl diphosphate and its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GTGGTGGACTGGCAAGAGATCACAAATCTTCAATCAAGAGACGGATCATTTTTAAGCTCC 970

The present invention describes an isolated terpene synthase (I)

Comprising a region with at least 20% identity to region 265-535 of a 548

comprising a region with at least 20% identity to region 265-535 of a mino acid (as) sequence (la), given in hAX908131. (I) contains nine alpha carbon atoms (alphaC) that have interactomic distances, between each other, within tabulated ranges, and have an ordered aranges, and have an ordered arrangement of R groups (defining as side chains), excluding specific tabulated arrangements (tables given in the specification). (I), and cralted arrangements (tables given in the specification). (I), and crelated enzymes, are used to produce a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances, flavours, pheromones, defensive agents, pigments, antitumour agents, components of signal transduction pathways, precursors of steering confidences and bile acids, as photoreceptors and as co-factor side chains. Components of signal transduction pathways, precursors of steering by encoding them) are used as controls in the analysis of products formed by encoding them) are used as controls in the analysis of products formed by controling expression of terpene synthases or inheritance of the gene in plant breeding programs. The new synthases may produce novel terpene cycloproducts. AAA38910 to AAA38938 and AAY90831 to AAX90859 represent invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               730
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             791 CACCICCTITCATCTCCCAAATCCACCAAAAGCGCCCAGAAAAAGGCTTCAAAAGATTCCC 850

                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of monoterpene synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-alpha-pinene synthase, immonene synthase, wyrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants
                                                                                                                                                                                                                                    terpene

```
This is the nucleotide sequence of grand fir (Abies grandis) B-alphabisabolene-synthase CDNA. It codes for a wound-inducible enzyme (see AAY06566) that is capable of generating multiple sesquiterpenes. especially B-alpha-bisabolene, from farnesyl diphosphate. The full-length CDNA was obtained by 5'RACE from a wound-induced grand fir stem CDNA library. It differs from the sequence of clone AG1, provided in AAX87504, by a single nucleotide at position 194 (C is AG1, T in the present sequence) that results in an amino acid change from Ala-65 in AG1 to Vale5 in the protein of AAY06566. The present sequence is believed to be the correct sequence of grand fir B-alpha-bisabolene synthase CDNA. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           invention provides gymnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           730
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             597

                                                                                                                                                                                                                                                                                                                                                                                                 This is the sequence of a computer-generated nucleic acid coding for a grand fir (Abies grandis) E-alpha-bisabolene synthase polypeptide (see AXV06568) that has conservative amino acid substitutions relative to the native E-alpha-bisabolene synthase sequence given in AAV06562. E-alpha-bisabolene synthase is a wound- inducible enzyme capable of generating multiple sesquiterpenes, especially E-alpha-bisabolene, from farnesyl capholate. The invention provides gymnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, sesquiterpene synthase in a prokaryotic or eukaryotic production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl diphosphate and its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       297
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                730
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            537

This is the nucleotide sequence of the grand fir (Abies grandis) E-alphablaabolene synthase full-length cDNA insert of plasmid pAG1. The CDNA clone codes for a 817-amino acid wound-inducible enzyme (see AAXV6562) that is capable of generating multiple sesquiterpenes, especially E-alphabla constant from farnesyl diphosphate. The full-length cDNA was obtained by 5'RACE from a wound-induced grand fir stem cDNA library. A separately consolution (see AAX87529) contains a single nucleotide difference from AG1 (T for C at position 238) and is believed to be the correct sequence for grand fir E-bisabolene synthase. The invention provides of granosperm sequiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or enkaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter cellogical interactions mediated by farnesyl diphosphate and its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             791 CACCTCCCTTTCATCTCCCAAATCCACAAAAGCGCCAGAAAAAGCTTCAAAAGATTCCC 850
